

# Public support for government action on toxic chemicals, plastic pollution, and climate risk

Environmental Defence Canada

April 2025

# Methodology

The survey was conducted with 1,200 adult Canadians over the age of 18 from April 14 to 16, 2025. A random sample of panelists were invited to complete the survey from a set of partner panels based on the Lucid exchange platform. These partners are typically double opt-in survey panels, blended to manage out potential skews in the data from a single source.

The margin of error for a comparable probability-based random sample of the same size is +/- 2.82%, 19 times out of 20.

The data were weighted according to census data to ensure that the sample matched Canada's population according to age, gender, educational attainment, and region. Totals may not add up to 100 due to rounding.

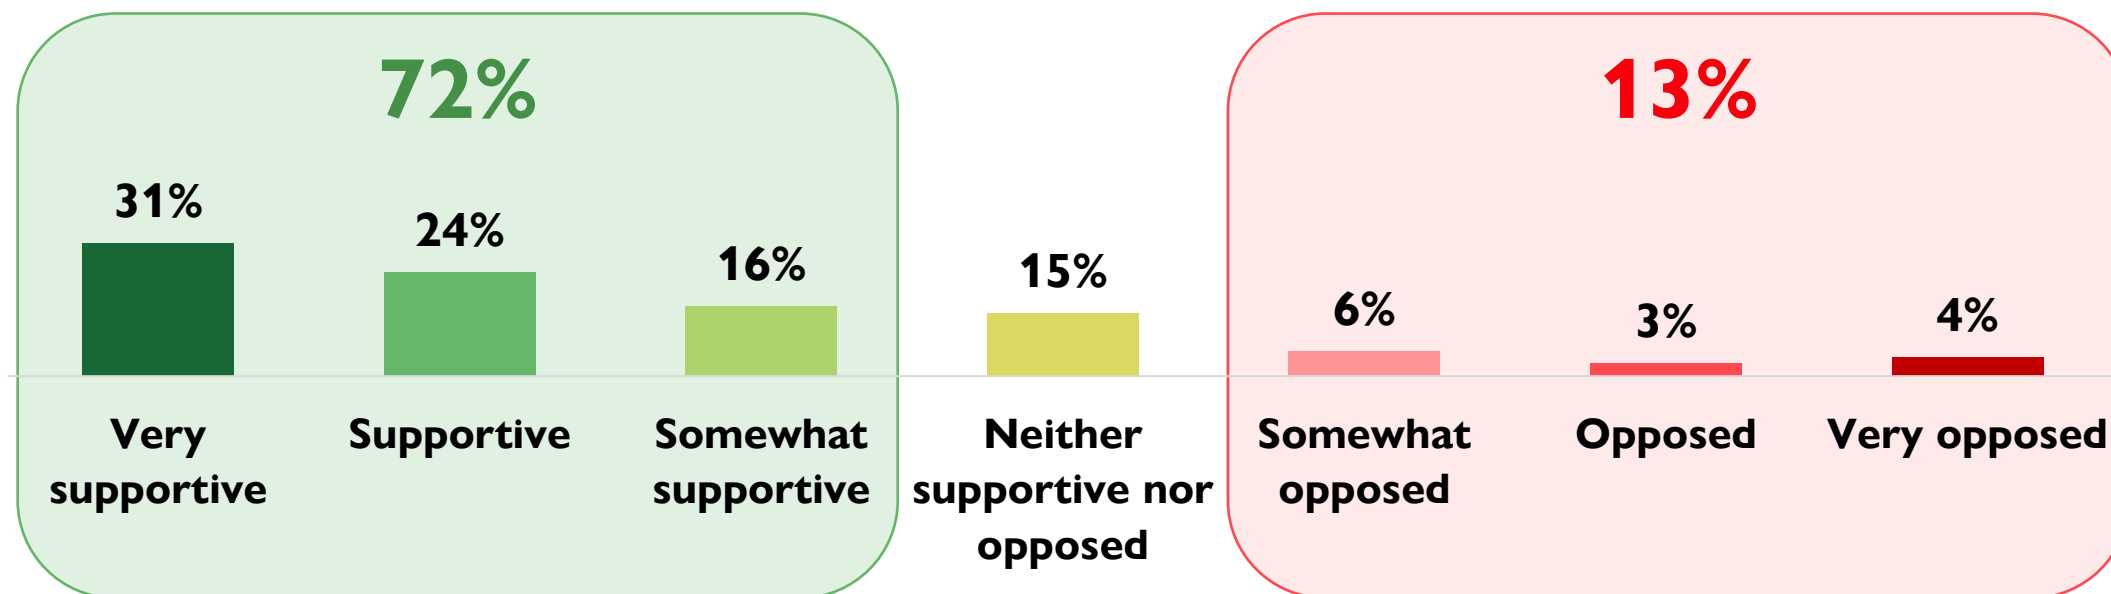

How supportive are you of the federal government setting strong limits on oil and gas pollution to protect Canadians from the economic and health risks associated with climate change?

## Majority (72%) support the federal government setting limits on oil and gas pollution to protect Canadians from the economic and health risks associated with climate change.

*Climate change is driving up costs for Canadians through extreme weather, higher grocery costs and health impacts. Canada's oil and gas industry is the largest source of climate-changing greenhouse gasses in the country. While other industries are working to cut their emissions, the oil and gas industry has not made progress in cutting their own pollution and have failed to invest their own revenues into reducing their emissions, making it harder for Canada to do its part in fighting climate change.*
