

**Thank you for taking action. Your call will begin shortly!**

**Tips for Your Call:**

- Be polite and respectful. Your MP needs to hear from constituents like you.
- Introduce yourself as a concerned Canadian and mention the province you reside in.
- Tell them you're calling about the Alberta MOU and the proposed pipeline.
- Briefly share why this matters to you: The deal threatens climate action, Indigenous rights, and responsible use of taxpayer dollars while repeating the failed promises of 2018.
- See our script on the next page for talking points.

**Here are some talking points for your call:**

- **This concerns all Canadians.** Opposition to this pipeline deal is not limited to one region. Canadians from coast to coast to coast expect climate leadership and responsible use of taxpayer dollars, not another broken promise disguised as economic development.
- **Indigenous communities say no.** Coastal First Nations have been clear that tankers navigating the treacherous Hecate Strait, known as the most dangerous waters in Canada, are a non-starter. Fast-tracking projects without consent violates Indigenous rights and undermines reconciliation.
- **The MOU weakens climate protections.** This deal proposes eliminating the Clean Electricity Regulations for Alberta, weakening the methane regulations, extending more fossil fuel subsidies, and undermining our climate goals. Other provinces will demand the same carve-outs, unravelling federal climate policy across the country.
- **The math doesn't work.** A new pipeline would generate 28.9 million tonnes of carbon pollution annually from production alone. The Pathways carbon capture project would only capture 10 to 12 million tonnes per year, and most carbon capture projects fail to meet their targets. This doesn't include the far larger emissions from burning the oil downstream.
- **Real nation-building means clean projects.** Instead of doubling down on fossil fuels, Canada should invest in high-speed rail, renewable energy, affordable housing, electric transportation, and partnerships with Indigenous communities on clean energy projects. These are the projects that create good jobs and align with the global energy transition.
